

"Invest with confidence in an uncertain market"

There's nothing to fear when you have VectorVest working for you

"In today's investment climate, you're facing a choice of losing time and money by being on the sidelines or nervously trying to find profitable stocks at the right time..."

"Only VectorVest gives you the unfair advantage to pinpoint winning stocks in challenging times—just point, click and profit."

—VectorVest® founder Bart A. DiLiddo, PhD

Even in today's market, VectorVest helps you in 2 ways...

1. In volatile times, VectorVest finds winning stocks of 200% or more

2. AND its market-timing system tells you when to buy and when to sell

Only VectorVest's advanced time-tested algorithm allows you to sell before a market downturn AND get you back in when the market is ready to climb—for minimum losses and maximum profits.

Meet the genius behind VectorVest®

Dr. Bart DiLiddo is one of the foremost investment experts in the world and the developer of the highly effective VectorVest system—which consistently beats those stocks picked by the “pros.”

Dr. DiLiddo isn't a broker, an analyst or a stock market prognosticator. He's a trained mathematician with a PhD from Case Western Reserve University, is a graduate of the Sloan School of Management at MIT and has a Fortune 500 business background. He knows mathematics...and he knows business.

For the past 30 years, he's used his unique combination of business experience and mathematical expertise to develop powerful formulas to analyze the performance of individual stocks, measure their risk and identify market tops and bottoms with almost foolproof accuracy.

Thousands earn double- and triple-digit profits!

Thousands of successful investors all over the world rely on his VectorVest formulas to help them lock in double- and triple-digit profits year after year in both good markets and bad.

VectorVest's track record of astounding success stems from Dr. DiLiddo's belief that mathematics could be used to analyze the performance of the stock market and of individual stocks.

“If you study the right indicators, history patterns and numbers behind a company,” says Dr. DiLiddo, “it will give you a great advantage and insight into its potential success or demise.”

The Wall Street Journal names Dr. DiLiddo a winner!

A winner of *The Wall Street Journal's* “Dart Board” stock selection contest, Dr. DiLiddo wrote for *Investor Alliances* magazine and is a regular speaker at American Association of Individual Investors meetings, *The Money Show* and other investment conferences and financial forums.

Keep reading to discover more about VectorVest and how you can get a **FREE** copy of Dr. DiLiddo's book, ***Stocks, Strategies & Common Sense***. This seminal book is fast becoming the must-have book on investments. **See page 18 for all the details.**

“VectorVest has scored huge profits in Bull and Bear markets.”

And it's made spectacular gains for every type of investor

Take a look at what VectorVest users have to say...

Improved my profit by 50% “I've only had VectorVest 2 months, but it has already improved my profit by 50%. One of the first stocks that VectorVest helped me pick is Owens Illinois (OI). I bought call options that are now up 300% in 2 months.

“I am very impressed with every aspect of VectorVest. I have had to change the way I do things a little, but it has all been for the better. I have better picks and spend less time doing it.”

—G.K., Hayward, CA

Thanks for saving me from myself “I am so excited to see the markets doing exactly what your site has been telling me. I tightened my stops last week and let my portfolio extinguish itself as you suggested. Now I look at the market and the stocks that I was ‘stopped’ out of are continuing to free fall. I look forward to continuing to follow the advice and to riding the next *VectorVest Wave*.”

—J.W. Cambridge, WI

Invaluable for market timing “I have selected stocks from different strategies from the VectorVest User Group with success. I also look for VectorVest to help with market timing. Two recent examples, FNIS up 24+% and SWTX up 18%, are stocks selected using VectorVest.” —B.C., Oakland, CA

50%, 100% and 300% winners! “I took VectorVest's advice last year and got out of the market. The results have been FANTASTIC! I have had one 300% winner, three 100% winners and numerous 20%–50% winners. My wife's IRA is up 100%+ since December and my Roth is up 60%. I'm still long and very profitable from the Jail Break strategy. In a world of financial hucksters, you guys are the *real-deal*.”

—M.L., Annapolis, MD

Excellent RT indicator “You have an outstanding system and without a doubt the finest indicator (RT) ever conceived by anyone.”

—D.S., Mebane, NC

VectorVest provides all the tools, information and training you will ever need to find winning stocks in ANY market condition.

Now you owe it to yourself to take advantage of the only stock analysis and market-timing system that...

- **Would have turned a \$100,000 investment into a \$1,109,601 bonanza with just minutes of your time twice a year for 10 years.**
- **Instantly rates over 8,000 stocks every day for value, safety and timing.**
- **Automatically signals market turning points using a market-timing model that will help you buy low and sell high!**
- **Is so easy to use you can find deeply discounted stocks with just a few clicks of a mouse.**

Bart A. DiLiddo

Bart A. DiLiddo, PhD

Dear Profit-seeking Investor,

Imagine rebalancing your portfolio just once every 6 months over the past 11 years and earning a 737.93% return.

Well, stop imagining. That's exactly what you would have achieved using VectorVest U.S. between 1/2/1996 and the day we went to press. And that was using the most conservative of the 9 strategies detailed in this report.

That means your investment of \$100,000 would have grown to a whopping \$837,930.28!

All you need is a 20-stock portfolio selected by VectorVest's Value, Safety and Timing indicator (VST) and about 20 seconds to spare in January and July.

Dr. Bart DiLiddo, breakthrough creator of VectorVest. It's the most advanced online market-timing system today—and yours to try RISK FREE.

On the first trading day in January you buy the top 20 stocks identified by VectorVest's VST indicator. Hold them till July. Then you simply sell the stocks that are no longer in the top 20 and replace them with the stocks that are. It's that simple!

From May 2005 to May 2006, this incredibly easy investment strategy raked in a profit of 88.65%.

In a moment I'll share with you **9 other easy strategies** for you to try using VectorVest U.S. These are strategies anyone can use anytime to beat the market—all it takes is a click of a mouse and VectorVest does all the work for you!

Why investors love it

With VectorVest U.S. you'll discover just how much

(Continued on page 4)

(Continued from page 3)

easier, safer and more profitable investing can be.

At last, no more sleepless nights worrying whether or not your nest egg is safe. No more having to rely on brokers and TV pundits for stock tips. And no more concerns about whether you'll have enough money when you retire.

As P.M. of Midland, Texas wrote me...

"I want to thank you and VectorVest for building my portfolio value beyond what I thought was possible entering my retirement. My portfolio value—all equities—stood at \$534,372 at the close of the year..."

its current value is \$890,290."

I receive letters and emails like this every day. They are true stories of people who have found financial independence and prosperity because of a complex algorithmic formula I created to help make investment decisions a piece of cake.

Watch your investment income zoom higher and higher

Want to see the size of your investment income skyrocket while still shooting for higher growth and capital gains? Well, that's easy enough...

I've already told you about our VST strategy, using

3 reasons you need VectorVest's Market-Timing System to buy low and sell high!

No hunches. No guesswork. No emotion-driven forecasts. VectorVest's **Market-Timing Indicator (MTI)** is based on flawless mathematical logic.

These algorithms literally tell you when to enter the market at the beginning of a bullish run. Or tell you when to exit the market, when the market has topped out and the bears are on the prowl.

The MTI relies on 3 all-important variables...

1. The VectorVest Composite (VVC): This is an average price that represents all 8,000-plus stocks in VectorVest's database. It indicates the market's direction!

2. The VVC's Relative Timing (RT) Indicator: This signals a stock's short-term price performance. It's used to confirm the VVC's signal of an upcoming trend.

3. The VVC's Buy/Sell Ratio (BSR): This variable tracks the changes in the percentage of stocks receiving a Buy or Sell recommendation.

All this data is combined into a single easy-to-use, easy-to-understand indicator called the MTI. How does it work?

If the price of the VVC goes up for 2 weeks without a downturn, this is an early sign of an uptrend. Another "up" move and it's almost certain. But we have to be sure.

Next, the VVC's trend is confirmed by the RT using a 0.0 to 2.0 scale. If the RT is above 1.0, you have a very high probability of a sustainable market uptrend. Still, the algorithm is at work to be absolutely sure.

Confirms major market trends

So VectorVest uses the Buy/Sell Ratio. If there are more Buys than Sells, this ratio will be above 1.0, and you have absolute confirmation that the market has begun a sustainable bull run.

It's important to note here that the MTI does not forecast sustained major market trends—it confirms them!

For more about this incredibly accurate timing tool be sure to read Chapter 20 in **Stocks, Strategies & Common Sense**. It's a \$24.95 value—yours **FREE**—with your No-Risk 5-Week Trial of VectorVest U.S. **For details see page 18.**

Or act now and visit **www.TryVectorVest.com** and get started today!

On March 26, 2009, VectorVest signaled a confirmed Market Up Call; recommending prudent investors transition from bottom-fishing to top VST Buy-rated stocks.

Relative Value, Relative Safety and Relative Timing. Well, meet its income-producing cousin—YSG.

YSG measures a company's Dividend Yield, Dividend Safety and Dividend Growth—using VectorVest's 0.00 to 2.00 rating system.

Frankly, it's hard to go wrong when you buy stocks with high YSG ratings.

The stocks that rise to the top using YSG are dependable companies that tend to stay out of the spotlight, but quietly and steadily increase their share values and their dividends.

Kimco Realty (KIM), which had a high YSG rating

Without question the best source

“Your advice and strategies show me how to make money instead of losing it in a down market. VectorVest is without question the best source for seeing the direction of the market, when to be long or short, and what stocks to buy or short.” — M.T., Brentwood, TN

of 1.25, is a perfect example. Kimco is the nation's largest owner of neighborhood and community shopping centers, with a 4% dividend yield. The

(Continued on page 6)

Strategy #1—For Gold Bug Investors How you can mine triple-digit profits in the gold boom of 2010

Start seeing 155% profits or more by taking action NOW

Today's gold bullion market is exploding. And as of this printing, we're seeing record-breaking highs in the price of gold. But many experts believe that's just a drop in the bucket.

Some of the top gold analysts predict that gold prices will climb to unprecedented highs of \$1,800 an ounce...\$2,000 an ounce...or more. Even the conservative World Gold Council believes the price of gold would have to soar to \$2,200 just to match 1980 prices after adjusting for inflation.

Plus, gold demand is off the charts and will only increase with the help of a dropping dollar and growing fears of inflation. **Consider that...**

- India just snapped up 200 tons of gold from the International Monetary Fund.
- The leaders of the oil-producing nations are working overtime to convert their petrodollars into gold.
- China recently purchased \$24 billion worth of gold because of their fears over the dollar's future. And more gold buys are sure to follow.

This all drives the price of gold which has gone from \$287.80 on December 30, 1999, to \$1,126.80 on December 14, 2009.

But I think you'll discover that the real opportunity for big profits in gold (and silver too) almost always resides in the small cap mining stocks.

Small cap stocks have soared right along with the price of bullion. In fact, the small cap gold mining stocks recommended by VectorVest U.S. were up an average of 232.02% as of our press date. And silver stocks were up 276.46%.

In addition, small caps generally outperform the big mining giants thanks to their lower operational costs. For example, see how mining giant Newmont Mining (NEM) made a nice 94.82% increase. But during the same time, small cap Exeter Resources

Compare for yourself. During the run-up in gold prices that began in October 2008, the stock for mining giant Newmont Mining (NEM) profited 94.82%. But small cap mining company Exeter Resources (XRA) skyrocketed 597.85%.

(XRA) enjoyed a 597.85% increase. That's over 6 times the return!

You can easily use VectorVest's RV, RS and RT to locate the best combination of value, safety and timing among the 81 gold mining stocks tracked through VectorVest U.S. It's no wonder VectorVest subscribers have enjoyed a huge gold play.

And as we go to press, a portfolio of the top-20 VST-ranked gold stocks is up 216.04% since October 28, 2008.

And if you look at individual stocks...

- Golden Star Resources (GSS) is up 70.45% in just 3 months
- IAMGOLD Corp. (IAM) is up 83.46% in just 6 months
- Northgate Mineral (NXG) is up 181.36% in just 9 months

And since we're still in a strong gold bull market, I anticipate new fortunes to be made. However, if the market should start to turn around, you can count on VectorVest U.S. to provide the information you need to get out in time.

Want to know more about investing in gold mining stocks? Read my Special Report, **How to Get Double- and Triple-Digit Profits in Gold Shares and Gold ETFs**. It's a \$16.95 value—yours FREE with your No-Risk 5-Week Trial of VectorVest U.S. **For details, see page 18.**

IMPORTANT: Many investment professionals recommend 10% to 20% of your portfolio be committed to gold. Gold is an excellent hedge against inflation. And with today's gold bull run, you can see profitable rewards in a very short time. Trust VectorVest to show you the way.

(Continued from page 5)

company which has never cut its dividend, has also increased it some 7% a year.

It's hard to go wrong with a high YSG rating. Just run the preloaded YSG strategy and VectorVest will screen, sort and graph all the companies in its 8,000-plus stock database. In less than 20 seconds you'll have a list of all the companies that can consistently and reliably provide you with an ever-ballooning income check.

That's money in the bank!

But the story just gets better. Because if you combine the YSG indicator with the VST indicator, you'll have in a flash a list of stocks that have the highest combination of value, safety, timing, dividend yield, dividend safety and dividend growth.

Here's a remarkable example as we go to press...

Perdigao S.A. (PDA) is a well-established Brazilian meat processing company that has been around since 1900. You probably never heard of it. But it didn't escape VectorVest's VST-YSG indicator. On June 8, 2006, VectorVest alerted us to Perdigao with a VST of 1.34, a YSG of 1.22 and a 3.61% dividend yield. As we go to press it is now up 70%!

And look at this. Had you bought the top-10 listed stocks delivered by the VST-YSG strategy, VectorVest would have given you a whopping, safe and reliable 337% return on your investment over the past 11 years—enough to turn \$100,000 into \$437,665! And that doesn't include reinvested dividends!

Strategy #2—For Conservative Investors **How you can take charge of your portfolio and prevent losses**

"Safety-first" strategies you can use against market declines and failing stock picks

Even in the post-crash period, thousands of VectorVest subscribers are making huge gains while other investors are losing their shirts. Here's why.

In today's market, buy-and-hold strategies are dead. So if you're a conservative investor and prefer a safety-first approach to protecting your portfolio, here's what you need to do.

Start with VectorVest's three proprietary indicators—Relative Value (RV), Relative Safety (RS) and Relative Timing (RT) and combine them to help you take charge of your portfolio.

I call this strategy **High VST Newcomers**. And it's just one of 200 preloaded strategies included with VectorVest U.S.

When you run this strategy, VectorVest instantly shows you 10 stocks with the highest combination of value, safety and timing (VST).

But what makes this strategy a boon for conservative investors is the fact that unlike my more aggressive VST rankings, this screen selects only those stocks with a VST rating that has gone from less than 1.40 the previous week to above 1.40 for the current week.

Begin by buying the stocks with the High VST Newcomers strategy. Then you sell the stocks (if any) that have triggered a stop alert. And then replace them with the newest High VST Newcomers stocks.

**That's all there is to it...
and it takes less than 20 seconds**

I ran a High VST Newcomers test starting on December 10, 2004. Then I followed VectorVest U.S.'s recommendations

over the past 5 years—including the market crash of 2008 and the beginning of 2009.

At the end of the 5 years, the High VST Newcomers strategy delivered a safe and conservative return of 101.73%—while the S&P LOST 1.84%!

You CAN take control of your financial destiny. Just spend a few minutes every day with High VST Newcomers. If you had done so starting in December 2004, you could have turned a \$10,000 investment into \$20,172.73 today. Not bad for a very conservative strategy!

So what are you waiting for? Profits are passing you by if you don't take action and take control. Try VectorVest U.S. in your home for 5 weeks RISK FREE. **For details, see page 18.**

Sorting and screening tools have helped me make over \$534,372!

“I've been using the VectorVest system with positive results for 10 years. Upon my retirement, my portfolio was strong—with all equities—around \$534,372. Within the last several years, I've enjoyed a 140.7% profit. Its current value over that time period for San Juan Basin (SJT) alone gained \$373,120. Have sold most since, and now at 83% cash looking for safe dividend producers.

“Your program's best attribute is sorting and screening equities by a multitude of categories. I'm a retired petroleum geologist. I don't believe I would have had knowledge of Petroleum Royalty Trusts if not for your program.” —P.M., Midland, TX

So what really controls stock prices?

In 1978, I took on the challenge of creating an incredibly easy-to-use stock analysis and market-timing tool. It wouldn't be driven by all the emotion of investment decisions. Instead, it would be driven by the flawless logic of pure math.

This mathematical model would clearly define what really causes a stock's price to rise or fall.

After 25 years of putting thousands of algorithmic equations to the test, I discovered that all the influencing factors could be summed up in 3 simple variables—**Relative Value (RV)**, **Relative Safety (RS)** and **Relative Timing (RT)**.

These 3 mathematical variables are at the heart of the most powerful (and easy-to-use) stock analysis and market-

Safe, vigorous returns

“VectorVest is priceless to me for locating the stocks with the most potential for safe, vigorous returns. VectorVest told me about NVR, and that stock returned 41% for me in 2 months. No one else talks about NVR. Ditto for NFI, another great performer for me.

“VectorVest prevents me from buying overvalued stocks. It is amazing how many of those are hyped by other analysts. I have passed on many stocks that were recommended by other analysts but that didn't pass VectorVest muster and I missed out only on big losses.” —G.B., San Luis Obispo, CA

timing system you'll find anywhere—**VectorVest U.S.**

How it works

Here's how these 3 proprietary market indicators

(Continued on page 8)

Strategy #3—For Bottom Fishing Investors

How you can nail the rally—with market timing that's proven to work

Take advantage of market turning points to make a fortune

Even in this post-crash period, VectorVest subscribers are making huge gains bottom fishing stocks while other investors are losing their shirts. Here's how.

Start with the VectorVest Views. It's like a weekly market analysis report. On March 6, 2009, the Views published *Itching to Rally*. Here's an excerpt:

Investors are refusing to accept bad economic news...they're rationalizing it to create reasons to buy stocks. Look for this behavior as we go forward. You'll see it happen over and over again.

Each of the big down days we've seen recently was triggered by something out of Washington. The biggest up day on February 24 was caused by Dr. Ben Bernanke's testimony to Congress, which wasn't even factual.

Investors are dying to buy stocks. And any scrap of good news, true or not, will serve the purpose. This market is Itching to Rally.

With information like this, it's time to seek out a strategy.

Your next step is to read the VectorVest Strategy. A strategy is given for every trading day, presented after the close of the market, for guidance on tomorrow's activity.

On March 9, 2009, the market bottomed and VectorVest reinforced its recommended strategies listing them again:

We will exit our Contra ETF positions and go long with one of the following strategies if an explosive rally occurs:

- Jail Break—No Contra ETFs
- Silber's Singles/BMB
- Blyar's Bottom Feeders/BMB
- Pirates Long
- Bottom's Up

VectorVest virtually tells you what to do based on existing market conditions.

The final step is to use the advanced VectorVest search engine—UniSearch. Simply run the recommended strategies to return the best candidates for exploding off a market bottom.

On March 10, 2009, the market opened sharply higher...that's the signal to get in! All 5 strategies produced explosive results.

No hard work. No time-consuming research. VectorVest even provided the names of the best stocks to make money.

Discover how you can find high-profit turnaround stocks ripe for explosive triple-digit gains. Read my Special Report, **Bottom Fishing: How to Master the Art of Buying Low and Selling High for Outstanding Performance.** It's a \$16.95 value—yours FREE with your No-Risk 5-Week Trial of VectorVest U.S. **For details see page 18.**

On March 9, 2009, VectorVest makes the perfect call signaling the biggest rally in 70 years. Simply follow VectorVest's advice and you can make money in this post crash.

(Continued from page 7)

work to make you rich.

Relative Value (RV): This indicator finds not just cheap stocks but undervalued gems.

Relative Value tells you at a glance whether a stock is undervalued or overvalued. When VectorVest indicates that a stock's RV is above 1.00—on a scale of 0.00 to 2.00—then that stock is quite simply a better investment than AAA corporate bonds. But when a stock's RV is below 1.00, you'd be better off buying bonds.

Using RV you'll easily pinpoint undervalued stocks like these winners.

Southern Copper (PCU) (10/3/2005) RV was 1.58 with a price of \$27.87; now it's \$93.35, **an increase of 234.9%**

Deckers Outdoor (DECK) (6/1/2005) RV was

Thanks to VectorVest my retirement is saved!

"I have saved tens of thousands of dollars by following your indicators. My retirement would have been postponed by several years if I didn't have the benefit of your service. I'm glad not to be one of the people who opens their quarterly 401(k) statements and wonders what to do after the damage is already done. Thank you!" —K.S., Clearwater, MN

1.62 with a price of \$23.66; now it's \$88.20, **up 272.8%**

Perdigao S.A. ADR (PDA) (6/2/2003) RV was 1.61 with a price of \$2.98; now it's \$36.93, **an increase of 1,139.3%**

Relative Safety (RS): This indicator tells

Strategy #4—For Value Investors

How you can "buy on the dips" and see profits of 267% or more

A proven low-risk strategy using safer S&P 500 stocks

I don't believe in buying stocks that are going down in price. But sometimes the market is very choppy. Week after week, the market swings back and forth. Entry and exit points are not so easy to find.

That's when the pros make money by "buying on the dips."

The rule to remember is never, ever buy a stock when it's falling in price. It's like catching a falling knife. And never, ever dollar average on the way down. You should dollar average only when a stock's price has stopped going down. But how do you know?

Let VectorVest's Market-Timing System tell you—and then you'll be ready to buy on the dips.

Here's a "buying on the dips" strategy I call **S&P 500/RT Ascending**.

Unlike bottom fishing strategies, you're not looking at risky penny stocks, but far safer S&P 500 stocks. It's a value-investing approach.

Smart timing and value stocks result in big profits

This strategy selects only stocks from the S&P 500 Index and that are sorted by the Relative Timing indicator. This means the screen only looks for those stocks that are from the index that have been beaten down the most.

How does this strategy perform from the lows to the peaks? Take a look at the VectorVest market-timing graph to the right above for the period between March 9 and November 11.

Using S&P 500/RT Ascending, VectorVest recommends a basket of 10 S&P 500 stocks for the market dip on March 9. The

peak lasted till July 1, when VectorVest signals a sell as the market is about to start its decline.

This basket of 10 S&P 500 stocks delivered a return of 267% while the overall market return during the same time was only 37%.

With accurate market-timing signals you can enjoy triple-digit profits from "buying on the dips."

That's a resounding drumming of the market by 229% in just over 4 months

VectorVest signals the next dip a week later on July 8. Running the top 10 stocks from July 8 to the peak of August 13, you get a 57.31% return versus the market, which returned just 15%. So in just 1 month, you've drastically outperformed the market by 42%!

To learn how you can use market timing to your profitable advantage, read my Special Report, **Guidance on Strategy and Market Timing**. It's a \$16.95 value—yours FREE—with your No-Risk 5-Week Trial of VectorVest U.S. **For details see page 18.**

Or start making money now. Visit **www.TryVectorVest.com** and get started today.

you how safe a stock really is.

If you're a conservative investor, you'll definitely want to keep track of a stock's RS.

On a scale of 0.00 (extremely volatile) to 2.00 (extremely safe), the Relative Safety indicator will tell you at a glance how risky or safe any stock is you're thinking of buying.

To determine the RS, VectorVest looks at a stock's price appreciation history, its historical price volatility and also the consistency of its financial and operating performance. Its debt-to-equity ratio, market cap, sales volume, length of time in business and sales volume are also factored in to every stock's RS.

Easy 35% gains with VectorVest's Jail Break strategy

“I currently have VectorVest as well as the AutoTester. With its amazing Jail Break search I have hit the 35% gain threshold many times (rough problem, I know). By the way, have I mentioned how great Jail Break is? I have taken my money and more than doubled it since December 3, 2008. Best money I have ever spent besides for my wife's wedding ring!” —B.C., Senior Financial Analyst, Davenport, IA

Here are a few very safe and very profitable picks from VectorVest U.S.:

(Continued on page 10)

Strategy #5—For ETF Investors

How you can make big profits with Exchange Traded Funds

A unique strategy for beating the pants off the market

An Exchange Traded Fund (ETF) is a security that tracks an index, commodity or basket of assets, but trades just like a stock.

With an ETF, you can diversify your investment risk with a single transaction—because ETFs allow you to take advantage of popular trends without having to select individual companies.

And with ETFs, you can easily buy stocks in emerging markets and take advantage of the economic boom in China, India, Brazil and other countries—without having to buy the stocks of individual companies (which can be difficult to buy and sell through U.S. brokerages).

So where do you begin?

Fortunately, VectorVest analyzes, ranks and graphs over 800 ETFs on a daily basis. And VectorVest offers you numerous preloaded strategy screens to help you find highly profitable ETFs.

VectorVest's High Average Volume ETFs strategy looks for ETFs that it rates a BUY or a HOLD. It also looks for ETFs that are the most actively traded.

VectorVest does all the work

Of course, VectorVest does all the hard work for you and tells you exactly which ETFs to buy now.

This proven conservative strategy was tested over the 9 months from March 26, 2009 to December 3, 2009. Here's what happened.

I bought the top 10 ETFs that the High Average Volume ETFs strategy returned to me. I then held these ETFs until VectorVest's Market-Timing System gave me a confirmed market downtrend signal. And at that point, I sold all my positions and stayed in cash.

Then, when VectorVest gave me a confirmed up signal,

I again bought the top 10 ETFs that the High Average Volume ETFs strategy recommended.

All told, I bought into and sold out of my portfolio only 3 times in the entire 9 months.

High Average Volume ETFs is an easy-to-use strategy for the conservative investor who wants to see double-digit returns.

The result? A very impressive 41.28% return. That was while most investors remained on the sidelines. Not bad for a conservative ETF trading strategy!

For even more strategies, be sure to read **Stocks, Strategies & Common Sense**. It's a \$24.95 value—yours FREE—with your No-Risk 5-Week Trial of VectorVest. **For details, see page 18.**

Or start profiting from ETFs now! Visit **www.TryVectorVest.com** and get started today!

\$3.5 million!

“I have made \$3.5 million shorting stocks; most were chosen on VectorVest. I followed your advice and it paid off. I have done considerably better than my friends and associates.” —D.J.M., Detroit Lakes, MN

(Continued from page 9)

McGraw-Hill (MHP) (6/1/2005) RS was 1.63 with a price of \$43.65; now it's \$70.39, **up 61.3%**

Stryker Corp. (SYK) (6/1/2006) RS was 1.52 with a price of \$44.31; now it's \$67.14, **up 51.5%**

UnitedHealth Group (UNH) (6/1/2004) RS was 1.60 with a price of \$38.61; now it's \$70.39, **up 82.3%**

RS will definitely keep you away from extremely volatile situations and risky misadventures—protecting your portfolio from possibly devastating reversals and losses.

Relative Timing (RT): This indicator signals a stock's short-term price performance.

This indicator is my personal favorite. Why? Investors

would kill to know exactly when to get in on a trade, how long to stay in and know exactly when to get out.

Simply put, when a stock's RT is above 1.00, its price is in an uptrend. When the RT is below 1.00, the stock's price is in a downtrend. And when the price trend flattens out, the RT returns to 1.00.

The Relative Timing analyzes the direction of a stock's price movements, the magnitude of its price changes and the dynamics of these changes to determine whether or not a stock's price will rise or fall and how strong that price momentum will be.

In other words, the VectorVest's RT indicator is the closest thing to a peek into the future to help you build a more profitable stock portfolio! Take a look at these hot stocks.

Strategy #6—For Traders and Short Sellers

How you can make money short selling stocks and with Contra ETFs

The secret to finding profits with stocks likely to fail

Selling short is the opposite of going long. In other words, short sellers make money when the stock goes down in price. It's a proven way for you to make double-digit profits in a down market. Even cautious investors can quickly make money with shorting. And it's not difficult to do with VectorVest.

Here's a tried-and-true shorting strategy I call **Doug's Downers** (yes, it was created by Doug, a subscriber, and it works like crazy).

With this strategy, you're screening for stocks ...

- Priced at or above \$5 a share
- VectorVest-rated for a SELL
- With Earnings-Per-Share and growth ratings of less than 0

Using the very effective High Average Volume Contra ETFs strategy VectorVest subscribers could have easily gained 54.91% in just 8 short weeks.

- And have the lowest combination of EY (Earnings Yield) and RT (Relative Timing)

In a matter of seconds, VectorVest reveals a full list of stocks, with the worst (that is to say the best shorting candidates) appearing at the top. Using this you could have returned up to 77.05% profit in just 7 months.

Profit in down markets with Contra ETFs, too!

You can also make money in a down market with Contra ETFs. VectorVest analyzes, ranks and graphs 84 of these Contra ETFs, all conveniently located in the ETFs (Short) Industry Group.

Using the very effective **High Average Volume Contra ETFs** strategy, VectorVest instantly selects high volume Contra ETFs. **These are the ones to buy when VectorVest signals the downturn.**

I bought the top 10 ETFs from the High Average Volume Contra ETFs strategy on January 12, 2009. I used a trailing stop of 15% of closing prices and held these Contra ETFs until VectorVest signaled an impending explosive rally on March 9, 2009.

At that point, I sold all my positions and locked in my profits. **The result? A very impressive 54.91% return in less than 2 months.**

Learn more about short selling stocks and ETFs. Read my Special Report, **How to Short Stocks with Confidence and Make Big Money in Bear Markets**. It's a \$16.95 value—yours FREE—with your 5-Week no-obligation trial of VectorVest. **For details see page 18** or visit **www.TryVectorVest.com**.

TBS International Ltd. (TBSI) (5/4/2007) RT was 1.84 with a price of \$16.20; now it's \$22.70, **up 40.1%**

Transcend Services (TRCR) (3/27/2007) RT was 1.82 with a price of \$10.25; now it's \$16.83, **up 64.2%**

SIFCO Industries (SIF) (4/5/2007) RT was 1.94 with a price of \$10.50; now it's \$20.37, **up 94.0%**

Use Value, Safety and Timing indicators together for more profitable results

You can easily use these three powerful VectorVest indicators by themselves or together along with other

parameters such as P/E ratios and dividend yields.

You can even combine parameters using mathematical operators. For example, many VectorVest users like to screen for stocks that have high RS values and super-high earnings growth rates.

Of course, all it takes is a click of a mouse and maybe a few priceless tips I have waiting for you at **VectorVest University.**

An advanced degree in making moolah

Even though VectorVest U.S. is a snap to use, I still

(Continued on page 12)

Strategy #7—For Options Traders

How you can trade options for big returns—without big risks

You don't have to fear options...VectorVest makes it easy and profitable

Those who trade options are among the most enthusiastic users of VectorVest! Why? Because of a unique VectorVest search tool that reduces your risk while boosting your profits. **It's called the Option Rate of Return and it's the ultimate search engine for finding superb, "optionable" candidates—stocks you should trade options on.**

For example, recently the Option Rate of Return identified Agrium Inc. (AGU) as a prime candidate. Now suppose you bought Agrium Inc. (AGU) at \$35 per share. If you bought 150 shares, you would have a \$5,250 investment. If AGU moves from \$35 to \$38.50, you'll have a 10% gain.

But suppose you had used your \$5,300 to purchase 10 call option contracts on AGU instead of the stock itself. At prevailing prices, you could have bought 10 contracts at \$5.30 each, controlling 1,000 shares. Each contract entitles you to buy, or call away, 100 shares of AGU at \$35 per share anytime during the following 8 weeks. Your dollar investment is nearly the same.

Look what happens to the option when the stock makes the same 10% move

Your call options are now likely to be worth about \$7,280, giving you a \$1,980 profit on your initial \$5,300 investment. That's an amazing 37% profit, rather than the 10% profit you would have earned by owning the stock itself.

Look at the actual return

By expiration, the stock had moved from \$38.44 to \$53.55. Now the options are worth \$18,550, giving you a \$13,250 profit on your initial \$5,300 investment. This translates to a profit of 250%, compared to a profit of 39% had you purchased the stock.

During market rallies you can achieve the best returns by screening for high-VST stocks that have an RT component greater than 1.50. These stocks are experiencing a particularly strong short-term upward price move.

Buy call options on these stocks

Buy call options on these stocks and you can frequently

receive in days and weeks the same returns that it takes most other investors a year to get. One of our subscribers reports annualized profits of more than 72% using this approach!

In addition to identifying the best candidates for an option-buying strategy, VectorVest helps ensure you don't overpay for options contracts. Its built-in **Black-Scholes** feature instantaneously calculates the theoretical price for an options contract based on the price of the underlying stock, the contract's strike price and other factors.

For more about options, read my Special Report, **How to Use Options to Supercharge Profits**. It's a \$16.95 value—yours **FREE**—when you take advantage of this No-Risk 5-Week Trial of VectorVest U.S. **For details see page 18.**

Or you can begin making money with options right now! Visit **www.TryVectorVest.com** and get started today!

AGU's September \$35 call option delivered a whopping 250% return in just 8 short weeks while the stock produced only a mild 39%.

(Continued from page 11)

wanted to be available to walk you through all the features of this remarkable online service. Plus I wanted to show you many of the proven and profitable strategies I have created over the years.

That's why I created VectorVest University. With VectorVest University, you'll have an online narrated tutorial to help you get started fast. It's the best way to explore VectorVest's vast array of stock analysis tools—and how to use them to make more money.

What's more, you learn at your own pace. Visit whenever you want a new strategy or a new investor's tip to help you make more money in a new and exciting way.

Peer into the past to see the future of your investments

Back testing is the ability to see how an investment strategy would have performed had you bought stocks with that strategy 1 year ago, 5 years ago or even 10 years ago.

Back testing lets you peer into the past so you can see the future of every one of your stock investments.

Just click a date in the pull-down calendar and you can find the stocks, industries or sectors that your strategy would have identified on that date.

Then just click a later date and see how your picks

would have fared had you bought and held them.

The back-testing process takes just seconds. It could make you a lot of money. And it could save you from a lot of miserable losses!

It provides you with feedback you need to fine-tune your strategy until it produces the results you want—while minimizing risk.

Invest with confidence

With VectorVest you'll have the confidence to activate an array of investment strategies with just the click of a mouse. You'll effortlessly evaluate and compare over 8,000 stocks to find just the ones you want. And you'll grow in your knowledge as an investor to make more money than you ever thought possible in the stock market.

As R.S. of St. Augustine, Florida wrote...

"I am pumping gains at an annualized rate of roughly 200% in my margin account and roughly 100% in my IRA. I cannot sing the praises of VectorVest enough."

It's no wonder VectorVest is the most popular widely used trading service among professional traders and brokers.

Strategy #8—For Natural Resource Investors

How you can mine for 557% profit or more in natural resource stocks

Easily track over 350 natural resource stocks

Today's profitable resource stocks include not only oil and gas but also gold, silver, nickel, lithium, copper, oil, natural gas, forestry, geothermal energy, rare earth metals and more.

Take Uranium...

With ongoing instability in the Middle East, and with energy consumption in India and China on a steady rise, uranium, and the nuclear energy it offers, has once again become a very important energy resource.

But limited uranium supplies have

With VectorVest you'll find ideal resource stocks delivering double- and triple-digit profits, like Uranium Energy Corp—557% in just 9 months.

driven the price of processed uranium up 927% since 2001.

Take Mineral Resources...

As we go to press, a portfolio of the top-20 VST-ranked mineral stocks is up 162.50% since March 9, 2009. And if you look at individual stocks, Harry Winston Diamond Corp. (HWD) is up 468.02% and Taseko Mines Ltd. (TGB) is up 404.82%.

Imagine...a \$10,000 investment in just these two stocks on March 9, 2009 would now be worth \$53,541.45.

And VectorVest is the only place you'll find daily side-by-side comparisons of more than 71 mineral stocks, 158 oil and gas stocks and 92 gold and silver stocks.

For even more strategies, be sure to read **How to Get Double- and Triple-Digit Profits in Gold Shares and Gold ETFs**. It's a \$24.95 value—yours FREE—with your No-Risk 5-Week Trial of VectorVest. **For details, see page 18.**

Or start profiting in mining now! Visit **www.TryVectorVest.com** and get started today!

Which means while many people are paying high commissions to brokers to place wise, moneymaking trades for them—and putting a lot of trust in their trading “genius” and expertise—often the real genius propping them up is VectorVest!

You see, nothing can beat VectorVest in terms of accuracy, timing, back-testing capability and sheer profit power! And of course nothing is easier to use...just point, click and profit.

No other stock analysis system analyzes more than 8,000 stocks plus 192 industries and 40 business sectors to tell you with 89.57% accuracy which is a BUY...which is a SELL...and which is a HOLD. Only VectorVest does this for you.

So let me ask you...knowing what VectorVest can do, **what are you going to do about your current holdings?**

Two reasons to first check VectorVest before you invest in anything again!

Reason #1: I know you probably already subscribe

It's absolutely the best

“I've tried nearly every software program in the business...AIQ, Telescan, Super Charts, you name it. VectorVest U.S. is absolutely the best. I don't use or need anything else.”

—E.J.C., Naples, FL

I'm 32% ahead

“I have been particularly successful using the strategies to find the best short positions to take. I am presently about 32% ahead on my activities this year using VectorVest programming.”

—B.J., Carmel, CA

to a newsletter or online service.

But what most (or all) of those services lack—even for the most active traders—is the deep numerical research needed to separate the winning stocks from the losers.

(Continued on page 14)

Strategy #9—For Retirement Investors

How you can find dividend-paying stocks for your retirement nest egg

The secret to finding high-quality dividend-paying stocks

You can make a lot of money on the stocks you own even if their prices don't go up. This is a strategy you must explore especially if you want to see your retirement savings continue to grow.

The first thing you need to do is pick good, dividend-paying stocks.

You can do this by accessing the Stock Viewer and sorting by “YSG-VECTOR Descending.” In a flash, you'll have a list of highly ranked dividend-paying stocks. Here's just a quick sample of the stocks we found...

North European Oil Royalty Trust (NRT) was the highest ranked stock. Wow, it's paying annual dividends at the rate of \$3.96 per share with a yield of 12.45%.

Partner Communications Co. Ltd. (PTNR) is paying

only \$1.52 per share, but has a Dividend Yield (DY) of 7.81%. That's not bad and it has a Dividend Safety (DS) of 78—which is very good.

Now here's a secret for collecting twice as much in dividend payments

The easiest way to do this is to simply buy twice the number of shares. A lot of people don't know it, but they can simply double the number of shares they own by using a margin account.

With a margin account, your broker will lend you the money to buy the additional shares of stock. Of course, he'll charge you interest on the loan, but that expense is tax deductible.

Moreover, you don't have to buy the same stocks you

already own. You can buy any stocks you wish. So why not buy stocks that pay higher dividend yields than the ones you already own?

You might even be able to triple your dividend receipts. And with VectorVest it's easy.

Start making money now! **For details see page 18.**

Dividend stocks like these are an excellent way to fortify your retirement nest egg—even if your stocks don't increase in value.

(Continued from page 13)

With VectorVest, you can easily double check the accuracy of stocks recommended by other sources. That's because VectorVest gives you instant access to all the data you'll ever need on more than 8,000 publicly traded companies, with each stock rated by VectorVest's highly accurate VST ranking system.

If you've been burned by a bad recommendation, you know how lousy it feels. The good news is that you never have to go through that again! Now you can instantly test every stock recommendation against VectorVest.

Reason #2: VectorVest's market-timing model will help you buy low and sell high.

Many "experts" offer opinions all day long based on nothing more than hunches and guesses. But when you fail to evaluate stocks in a mathematical, unemotional and unbiased manner, you're always putting your money at needless risk.

VectorVest will put you in the money. But I want you to see for yourself. Without any risk. Without any obligation.

Take VectorVest for a RISK-FREE spin and make all the money you want before you decide...

Because I'm so confident that you'll find VectorVest to be the best moneymaking investing tool you'll ever experience, I want you to try it—the full, complete version—absolutely **RISK FREE for 5 weeks**, as my guest!

Take it for a spin, kick the tires, put it through its paces and see how much money you can make. Check out the stocks you already own and see if VectorVest rates them a **BUY, SELL or HOLD**—and view a full analysis—over 100 customizable columns—on each stock you own.

No other online service gives you so many options,

Easy to use and completely customizable With VectorVest U.S. you can make a fortune with just a click of the mouse

Imagine screening, sorting and graphing more than 8,000 stocks to find the profits you want in any market condition. It's easy with VectorVest U.S. And if you can turn on a computer, you can make money with this powerful tool. Here's how.

VectorVest U.S. was created to give investors like you the power of choice. With it, you have customizable search fields to find the stocks you're looking for. Just point and click and VectorVest U.S. does all the rest.

You can easily customize your searches to your exact specifications.

You can create your own VectorVest investment

Novice nails 20% gains each week

"I'm still a novice at using VectorVest but I learn something new each week through Dr. DiLiddo's essays. I followed his essay of 10/24/2008, Make Money For A Lifetime and used his rules to purchase high volume, high VST Contra ETFs on Monday afternoon. And I used his rules to sell those ETFs this afternoon."

"I just calculated my return and my IRA investment is up 20% this week. I'll take 20% each week. Thank you, Dr. DiLiddo, and thank you VectorVest!" —C.R., Elon, NC

strategy or you can simply access the 200 preloaded stock strategies. All the settings have been done for you. Again, you just point, click and profit!

Better still, because it is so easy to customize your VectorVest U.S. search settings, you can create the kind of search screen that fits best with your investment style, no matter what kind of investor you are...

- » **Gold Bug or Aggressive Investor**

so much flexibility, so much insight, coverage, online help and analysis.

But don't take my word for it—see for yourself how powerful VectorVest truly is!

Try a No-Risk 5-Week Trial of VectorVest U.S., the world's most accurate stock analysis, today.

If at the end of the 5 weeks you don't want to continue using VectorVest to make more money than you ever dreamed possible on a consistently safe and reliable basis—just stop using it. And you'll never hear from me again.

But I must ask you to do me one small favor before I grant you unlimited access to VectorVest. And I ask this solely because I don't want our computers to be swamped with investors who aren't seriously interested in VectorVest and my RISK-FREE trial offer.

I must ask you for a small—100% refundable—fee of \$9.95. No, that's not a misprint. And yes, I know it's a small amount of money. But \$9.95 will effectively

(Continued on page 16)

VectorVest saved me \$27,000

“I have stayed in cash since your suggestion in July from your VectorVest strategy, your timing was impeccable. The Protecting Profits strategy-warning has saved me \$27,000 and I just want to say thanks.” —D.S., Muskego, WI

Without VectorVest I would have been wiped out!

“Aloha from Hawaii! After reading the note from D.S. of Muskego, IL., I also wanted to thank you and let you know that I went completely to cash in my IRA on July 23, 2007. I used several sources to make my decision and VectorVest was probably the most important.

“I can't say the exact dollar amount I would have lost, but, I can be fairly certain that all of my gains for the year of 2007 would have been wiped out by the end of the day on July 26. I cannot thank you enough!”

—D.N., Honolulu, HI

VST-Vector—the Super Indicator no investor should be without

The VST-Vector system blends a stock's RV, RS and RT into a single indicator. **It's as close as you'll ever come to an investment guarantee.**

It allows you to instantly find stocks with the best combination of value, safety and timing.

Just consider these 5 VST Super Indicator facts

FACT 1: High VST stocks have outperformed the market and are the stocks to buy when VectorVest signals it's time to get in!

FACT 2: A 368.7% return in one of the worst bear markets. In early 1996, if you had purchased an equal dollar amount of the 10 stocks with the highest VST and then held them, you would have celebrated a 459% return by July 2007. That's more than twice the return of the S&P 500.

FACT 3: In addition to earning more than twice as much as the S&P 500, you would have experienced far less downside. During that 11-year period, your portfolio would have suffered only a minor drawdown in only one year, 2002.

FACT 4: The 20 stocks with the highest VST would have generated a stunning 326% return during that 11-year period—more than 1.4 times the S&P 500's 229% return!

FACT 5: High VST-Vector stocks go up in price. We went one step further to test our system. We ran the same systematic test with every starting date from January 5, 1996 to July 11, 2007, with a 20-stock portfolio. Overall, the average annualized rate of return was 18.35% per year, with 68% winners. **No wonder it's called a Super Indicator!**

Discover how you can start earning huge returns with a Super Indicator in **Stocks, Strategies & Common Sense**. It's a \$24.95 value—yours **FREE**—with your No-Risk 5-Week Trial of VectorVest U.S. **For details see page 18.**

Or act now. Go online to **www.TryVectorVest.com** and get started today!

(Continued from page 15)

discourage (and tests have shown this to be true) all the "looky-loos" who aren't serious from clogging up our computers and phone lines.

It's only a small fee, but believe it or not, it will separate the truly qualified and interested investor from the mere window-shopper.

That \$9.95 is completely refundable. You must be absolutely ecstatic with the stock picks VectorVest brings you and the money it makes for you. If not, let me know and your \$9.95 will be returned to you at the end of your 5-Week trial period. No questions asked.

And just to make it up to you for this hopefully minor inconvenience...

I'm going to send you \$129.65 in FREE gifts—but you must respond in the next 7 days.

FREE Gift #1: My 96-page book, *Stocks, Strategies & Common Sense*—a \$24.95 value—yours FREE!

You'll gain valuable and actionable insight into successful investment strategies—using fundamental and technical analysis. These are the secrets every successful investor treasures. And they're the very essence of VectorVest.

You'll learn how to use a remarkable system sure to save valuable time in researching your stocks.

You'll discover the five greatest stock market myths of all time, how to pick and value stocks, whether Stop-Prices are for you and the best way to manage your portfolio for safety and consistent gains.

On 3/10/09, VectorVest subscribers were sitting at their desks ready to enter the market with one of 5 winning strategies. Here's how they did with Blyar's Bottom Feeders.

Up 45% in just 45 days

"I just wanted to let you know that since using VectorVest my portfolio is up 45% in about the last 45 days! I can't even believe it. I just do what you tell me to do, it's that easy. Thanks so much." —J.M., Riverside, CA

Plus this book reveals my "Teeny Boppers": Low-priced stocks with explosive price appreciation potential—and how to identify them, along with timing the market!

YES! That's a total of 7 valuable gifts—a \$129.65 value—yours FREE when you start your No-Risk 5-Week Trial of VectorVest U.S.!

Start now and you too will find winning stocks in less than 20 seconds because...

- » No other program will analyze 8,000-plus stocks, 192 industries and 40 business sectors, and tell you which among them is a BUY, SELL or even a HOLD.
- » No other program will tell you if the overall market, or any individual stock, is undervalued or overvalued, and whether or not the timing is perfect—and safe—to go on a buying spree. Only VectorVest will!
- » No other stock analysis system will provide you with more than 200 preloaded stock screening strategies—preselected for every type of investor—enabling you to screen, sort and graph stocks, ETFs, industry groups and business sectors—using 30 different customizable screening fields. Only VectorVest will!

VectorVest's highly regarded market-timing system—which has signaled every major market move since 1991—is showing me right now that the market is about to turn yet again.

So if I were you, I'd want to immediately use VectorVest's impressive analytical tools to double-check my current portfolio's readiness to protect and increase my profits.

And I'd also want VectorVest to pick some new positions for me—which could give me large short-term profits, in what bodes to be a very exciting near-term market.

Try VectorVest RISK FREE—today!

Sincerely,

Bart A. DiLiddo

P.S. Remember, the VectorVest U.S. stock analysis system is yours to profit from—for 5 full weeks—without risk or obligation!

And remember too, VectorVest's top recommended stocks have consistently lined investors' pockets with money—more than 89 out of 100 times (89.57%)—over the past 12 years!

Make your buying decisions easier with VectorVest Now you can effortlessly gauge a stock's true value

Every morning before the trading day begins, VectorVest calculates two specific measures of value for the more than 8,000 stocks in its database.

The first is the Relative Value (RV), which helps you see how one stock measures up against another.

The second is Intrinsic Value. This is calculated using a sophisticated discounted cash flow model that factors in 16 different data points including account earnings, earnings growth, profitability, inflation and interest rates.

Stocks with an RV rating above 1.00 are undervalued

This means they have an above-average appreciation

potential. Keep your eye on these stocks.

Sometimes a stock's RV will be above 1.00 even though its value is below its current price. This happens when a stock is selling at a premium—and future earnings growth will drive the stock's price even higher.

Apple Computer (NASDAQ: AAPL) is a perfect example. Just recently Apple Computer was selling for \$121.33, which is clearly above its VectorVest-computed \$95.76 value. However, VectorVest still gave it an RV of 1.34. That's because Apple is a particularly safe investment, as shown by its Relative Safety (RS) of 1.45.

This stability, coupled with Apple's impressive 25%-per-year earnings growth, pushed Apple's RV above 1.00 way back on January 23, 2004. By now, that's a 1,353% gain.

Discover how knowing value can make you a better investor.

Be sure to read Chapters 3 and 4 in **Stocks, Strategies & Common Sense**. It's a \$24.95 value—yours FREE—with your No-Risk 5-Week Trial of VectorVest U.S. **For details see page 18.**

Or act now and visit **www.TryVectorVest.com** and get started today!

Had you purchased Apple in January of 2004—as Relative Value crossed above 1.00—you would now be enjoying a 1,353% gain!

"Now YOU can try VectorVest—the same breakthrough market-timing system secretly used by investment experts—RISK FREE."

20 seconds is all you'll need to discover VectorVest is the easiest, most flexible stock picking system ever created!

Return the No-Risk 5-Week Trial Fax Certificate now and you'll receive your trial package via First Class Mail.

A broker's quiet little **SECRET** in uncertain economic times

It's no wonder many brokers, financial planners and portfolio advisors are turning to the power of VectorVest to protect their clients

You can't blame them! VectorVest is designed to help anyone make profitable decisions in any kind of market

Portfolio manager announces..."VectorVest is indispensable!"

"I use VectorVest literally for each and every trading decision. It is indispensable to my process. I am an investment advisor and associate portfolio manager with a large Canadian brokerage, and I use VectorVest to filter stocks for a portfolio I run for clients, which has been delivering a very solid performance, especially since I began using your software in 2005."

—K.R., Investment Advisor & Associate Portfolio Manager

See page 6 for conservative investors!

Investment manager declares..."The finest software of its kind!"

"I personally believe that VectorVest is the finest database software of its kind, and I have stated that repeatedly in formal presentations to large groups of individual investors." —H.G., Pittsburgh, PA, Business and Investment Management Consultant

See page 8 for value investors!

Investment professional proclaims..."The only system I would ever use!"

"As a seasoned investment professional...if I found it necessary to rely on only one source, I would choose VectorVest because it combines many of the features—technical and fundamental—that other sources tend to focus on exclusively." —J.P., San Antonio, TX, Investment Professional

See page 11 for options traders!

Imagine knowing your broker is using VectorVest—when you could be easily using it yourself! Act now and try VectorVest for 5 weeks absolutely RISK FREE.
